

Do You Know What THIS is?

- Discovered in 1968 it is the first remains (heel bone) positively identified as belonging to a *crucifixion victim*.
- This discovery did much to silence long standing criticism that the biblical account was inaccurate, lacking evidence of using *nails for crucifixion*. (John 20:24-28)
- 1800 years after the Gospels were written, *confirmation* comes that the writers of the New Testament lived in the early Roman Empire and were aware of early Roman customs.
